

ABSTRACT OF THE DISCLOSURE

Disclosed herein are methods and apparatus for providing context sensitive material to an individual. The context sensitive material relates to the context of a theme. The theme may involve a temporal event, such as a movie. The theme may involve an apparatus, such as an appliance, wherein the context of the appliance changes as a result of the manipulation of components of the appliance. The theme may involve elements within a set, wherein aggregation of the elements forms the theme. The context sensitive material may contain any information to provide the individual with further perspective on the theme. The context sensitive material is preferably stored in a database, and preferably may be retrieved over a network, such as the Internet.
